-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 28 February 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-50 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-50 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 4.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 9-16 and 22-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams, U.S. Patent No. 5,911,418 in view of Jones et al., U.S. Patent No. 5,913,726. Adams discloses a method for a card game including a jackpot component in a primary wagering game played by at least one player. Each player places a wager on the primary wagering game. A round of play is conducted in the primary wagering game with the players (col. 2 lines 51-67). Each player having a predetermined arrangement of indicia resulting from completion of the round is designated a winner. The step of designating a winner requires a player to have a predetermined arrangement of indicia upon completion of the round utilizing indicia displayed on one or more cards dealt to the respective players as a result of the step of playing a round of the card game. For example, a player is a winner if his hand is a flush, full house, etc. Each winner then has an opportunity to win a prize that is randomly chosen from a group of prizes that includes an incrementing jackpot, i.e. progressive jackpot (col. 3 lines 13-22, 63-66). The game is conducted in a

live form on a card table having a human dealer and using one or more decks of conventional playing cards (Fig. 1). The game may also be conducted in a virtual form on a video screen using one or more decks of virtual playing cards (col. 5 lines 26-27). In order to participate in the jackpot component, each player must place a side wager separate and distinct from the wager on the primary game. Adams further discloses providing an opportunity for each winner to win a prize that is randomly selected from a group of prizes, which includes an incrementing jackpot. Each winner has an opportunity to activate a jackpot button, which causes a segmented prize wheel to spin and randomly stop on one of a plurality of segments indicating a prize won. It is also obvious that the device to randomly select a prize could be an alternately lighting display case, a plurality of boxes or an animated character-racing device. All of these devices are well known in the art and do not show a criticality to the operation of the invention; consequently, it is up to the inventor's discretion which device to implement (Fig. 1; col. 3 lines 15-22, 43-66). Adams lacks in disclosing the game of blackjack or a separate side wager.

Jones teaches of a method for progressive jackpot gaming using the game of twenty-one otherwise known as blackjack. In order for a player to participate in the jackpot component of the game they must place a side wager separate and distinct from the wager on the primary wagering game. The incrementing jackpot is a progressive jackpot based on a percentage of the total amount of the wagers placed. When a particular prize randomly chosen for the

player is the incrementing jackpot, the jackpot stops incrementing and is awarded to the player. The player then has the opportunity to play the primary game again (See Jones col. 3 lines 46-67, col. 4 lines 1-22). It would also be obvious to have an incrementing jackpot be a time-based jackpot which increments a predetermined amount at predetermined time intervals. By the applicant's own admission in the background of the invention section of his specification. Incrementing based on predetermined time intervals is well known in the art. Thus it is obvious to increment in this style such that players can visually see the jackpot increase over time; thus, gaining more excitement and interest in the game. Winners are then selected only from those players whom placed a side wager and have obtained a predetermined arrangement of indicia upon completion of the round (See Jones et al. col. 3 lines 25-37). It would have been obvious at the time the invention was made to play the game of jackpot in the invention of Adams, many people enjoy blackjack and it is obvious to include it with the bonus wheel of Adams, so that blackjack players may also have a chance of winning a randomly selected jackpot. It is also obvious to have players place a side wager in order to participate in the jackpot. By having players place a side wager, the jackpot can be funded from the wagers, thereby, not having the gaming establishment lose money for awarding the jackpot. Jones also teaches of connecting players at a plurality of individual primary gaming devices that are electronically linked together to a common jackpot display showing the current amount of the

incrementing jackpot. Wherein the incrementing jackpot on the common jackpot display is visible to the players at the gaming devices and configured such that when a player from any of the gaming devices win the incrementing jackpot, the incrementing jackpot can be stopped from incrementing at the respective gaming devices (See Jones et al. Fig. 1; col. 3 lines 13-23, 66-67; col. 4 lines 1-3).

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Adams, in view of Jones in view of McCrea Jr., U.S. Patent No. 5,911,626. Adams lacks in disclosing connecting individual card tables. McCrea teaches of a jackpot system for a live card game in which a plurality of individual card tables are electronically linked together to a common jackpot display showing the current amount of the incrementing jackpot. Wherein the incrementing jackpot on the common jackpot display is visible to the players at the card tables and configured such that when a player from any of the card tables wins the incrementing jackpot, the incrementing jackpot can be stopped from incrementing at the respective card table (See McCrea Fig. 1). It would have been obvious to one of ordinary skill in the art at the time the invention was made to connect multiple card tables to one progressive jackpot, that way many players could compete for the same jackpot and not have to be limited to only one card table.

Claims 4-8, 18-21 and 27-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams, in view of Jones in further view of Tracy, U.S.

Patent No. 5,280,909. Adams discloses all of the limitations mentioned including a random-jackpot generating device in the form of a rotatable-segmented prize wheel. The wheel has a jackpot button, i.e. spin the wheel button, and an electric motor operatively connected to the segmented prize wheel. The jackpot button is hand-operable to cause the segmented prize wheel to spin by means of the electric motor and randomly stop on one of the plurality of segments of the prize wheel indicating that a prize has been won (See Adams col. 1 lines 43-55). The prize wheel is built into a card gaming table (See Adams Fig. 1). Adams lacks in disclosing incrementing jackpots within a predetermined range from a minimum to a maximum jackpot.

Jones further discloses an incrementing device with a jackpot display operatively connected to the incrementing device for displaying the amount of the incrementing jackpot. The incrementing device including a switch device that is hand-operable to manually stop the incrementing of the jackpot after the incrementing jackpot is chosen (See Jones et al. col. 4 lines 18-20). It is obvious to include a manual switch in a progressive jackpot so that one may stop the jackpot after a player has won; consequently, the player will win the jackpot amount at the time of the win. Adams and Jones lack in disclosing a slot machine game with a progressive jackpot.

Tracy teaches of a gaming system with a progressive jackpot. The incrementing of the jackpot is progressive being based on increasing a predetermined percentage of a total amount of the wagers placed (See Tracy

Art Unit: 3713

col. 5 lines 12-20). The jackpot is incremented within a predetermined range of amounts from a minimum to a maximum jackpot (See Tracy col. 4 lines 54-60).

It would be obvious that the minimum and maximum jackpots are calculated by first calculating an amount for a fixed jackpot and then creating a range around the fixed jackpot defined by the minimum and maximum jackpots which satisfies a predetermined payback percentage. Wherein the average value is within the range being substantially equal to the fixed jackpot. It is also obvious that ~~the~~ setting of the minimum and maximum jackpots includes determining how often and by what amount the incrementing jackpot increments. It is well known in the art that all of these statistics are well thought out and calculated by the casinos and game management companies, such that they profit from the game and do not take a loss. Consequently, it is obvious to calculate jackpot values so that the owners ~~of~~ of the machines profit. The Applicant also admits in the background of the invention section of the invention that it is well known to have jackpots increment to a maximum value ~~at~~ where it remains until won by a player and ~~that~~ <sup>when</sup> after reaching the maximum jackpot the incrementing jackpot returns to the minimum jackpot and continues incrementing in a continuously upwardly scrolling manner until the jackpot is won by a player. These concepts are well known throughout the art and are utilized so that a jackpot does have limits and the casino will not award a prize in which they are at a loss. Consequently, it is obvious to implement the various incrementing method into the invention of Adams.

Moreover, the various incrementing methods do not show a criticality to the invention and any similar method may be used.

Tracy further teaches of a primary casino game comprising slots wherein each player having a predetermined arrangement of indicia upon completion of a round utilizes the indicia displayed on one or more reels of a slot machine as a result of the step of playing a round of slots is a winner. The slot machine uses an electro-mechanical slot machine having generally cylindrical reels that are rotatable. The slot machines are electronically linked together to a common jackpot display showing the current amount of the incrementing jackpot. The incrementing jackpot on the common display is visible to the players at the individual slot machines and configured such that when a player from any of the slot machines wins the incrementing jackpot. The incrementing jackpot is stopped from incrementing at the respective slot machine when won. Consequently, when the jackpot is selected it is stopped from incrementing (See Tracy Fig. 1; col. 2 lines 33-46; col. 8 lines 6-12). It would be obvious to use a virtual form on a video screen using a virtual slot machine have a plurality of virtual reels. Video slot machines are well known in the art and it is up to the inventor's discretion which type to use. Both serve the same purpose, of displaying indicia and indicating a win or loss. It would have been obvious at the time the invention was made to implement Adams's progressive jackpot method with a slot machine. Many players enjoy playing

slot machines and by incorporating a randomly selected jackpot into a bonus game on a slot machine more players would be interested in playing the game.

***Response to Amendment***

It has been noted that claims 1 and 50 have been amended.

***Response to Arguments***

Applicant's arguments, filed February 28, 2003, with respect to claims 1-50 have been fully considered but are not persuasive.

<sup>Due</sup>  
~~Do~~ to amended claim 50 the 35 U.S.C. 112 rejections have been withdrawn.

The Applicant argues that Adams does not teach how to make or use the claimed method. The Examiner disagrees; the Examiner believes that it would be clear to one skilled in the art how to implement Adams' method. The Applicant further argues that Adams has a brief disclosure. The Examiner notes that the patent is to be read as a whole, including the background, summary, detailed description and claims. One should not just read the detailed description to clearly understand the invention. The Examiner further notes that size doesn't matter. The length of the description is irrelevant as long as one skilled in the art can make and use the invention, which is clearly possible from Adams' patent. One skilled in the art clearly knows how to

implement a progressive jackpot; further Jones clearly lays out the method for utilizing a progressive jackpot.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julie K Brockett whose telephone number is 703-308-7306. The examiner can normally be reached on M-Th 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Valencia Martin-Wallace can be reached on 703-308-4119. The fax phone numbers for the organization where this application or
